Natural Walking Bindings **REVOLUTION**

JUST TRY IT !

We'll try to explain how Natural Walking Bindings and Natural Walking Plates will revolutionise your walking style skis at feet, but "if you don't try, you won't understand".

After reading the following presentation we hope you **WILL BE TEMPTED TO TRY** our products. Only trying them you'll be able to **UNDERSTAND** and **DECIDE**. **TEST CAMPS** on snow or glaciers are available all year round.

www.n-w-b.com

Book now your free test camp !

Two steps are enough ... to understand the big difference. Regardless if you are old or young, a tourist or an athlete; all of us walk in the same way. Being able to do that with skis at the feet, gives you a feeling of lightness and freedom that you haven't experienced before. Everything is easier, thanks to the fact that the feet are fully free, the position of the body is more natural, the skins grip more due to a backward centre of gravity. Longer steps are possible as well as climbing onto obstacles considered impossible so far. In deep snow you will always see your ski tips "magically" out of the snow...

www.n-w-b.com

Also the back toe can rise and the ski stays onto the snow...

NWB and NWP allow not to raise your ski when your foot is far from your body (and the added weight has a big lever arm: 50-70cm); this leads to an energy saving. Moreover, if the ski stays on the ground its weight and half of the binding one rest on the ground as well. For example, if with normal bindings you can go for 4 hours, with NWB or NWP you have in the legs 1 hour more ! Even if you'll be 10-15% faster! There is also a psychological component: being no limitation to the movement of your feet the mental and physical exertion, present with traditional bindings and due to the body weight that always burdens muscles, compelled to a continuous adaptation also due to a boot limited step, is eliminated.

Moreover, the recovery is faster since there is no more lumbar nor joints pain.

TRY TO BELIEVE!

www.n-w-b.com

5

Natural Walking Bindings: *Higher, Faster in any conditions...*

Natural Walking Bindings:

Higher and faster with any kind of snow...

• The ski tip is not loaded so it **ALWAYS FLOATS ON THE SNOW!**

• The center of Gravity is on the back leg, so the skin is at its maximum grip condition.

• The foot is free to rise and go more & more forward.

• On steep slopes, obstacles or deep snow you can walk very easily. See the ski pool sinks lot in the snow->

3

Natural Walking Bindings: ...running ski at feet...

... try to do that with your old bindings !

HAVING FREE FEET IS ALWAYS BETTER... NO MATTER WHO YOU ARE.

NWB[®] Natural Walking Bindings Higher, Faster !

NWB bindings allow you to walk ski at the feet in a more natural way, then in an easier, efficient and rapid way.

The natural walking has as direct consequence a postural and energy benefit together with the possibility to overcome obstacles without the mechanical limit of the boot sole that, due to the ski tail bumping on the ground, cannot bend backward at all ! The ankles soo must open unnaturally and forcing the boot back. New flexible boots help a lot, but those movements are highly energy consuming. Moreover, in deep snow you'll realise that your ski tip, being loaded no longer, will always float on the snow sparing you the disinterment action of the ski at each step.

The advantages are evident to everybody as soon as you make the first two steps. If you already own the Dynafit-like bindings, you can buy one of the "plate" model:

NWP Natural Walking Plate

Ask to your favorite dealer or Buy on-line on:

Binding & Toe Lifter together:

Natural Walking Bindings (NWB):

Toe lifter and binding integrated:

NWB-LITE: with integrated binding, back and front (M1-RACE CNC Ergal) for the maximum weight saving. Dedicated to people who want the maximum lightness under the boot. It's the strongest and cheapest combination.

NWB-VR:

The ultra-light solution for competitions and for skiers who love extreme performances where the weight can make the difference. The front and the back bindings are integrated parts of the whole structure which has been lightened in every detail till the limit of the minimum resistance needed to face with safety the demanding slopes of the World Cup circuit.

M2 Vertical Race Bindings:

M2 RACE is a the lightest binding on the world market for Vertical Race. Robust and mechanically

Maruelli NWP

Piastre rivoluzionarie per un avanzamento con le pelli intuitivo, simile alla camminata. Dai vertical al freeride mountaineering migliorano postura, emersione delle spatole in neve fresca e lunghezza del passo. I vantaggi dinamici compensano l'aggravio di peso

Finché non puoi non crederci. Le osservi, mostri il peso, e lo accetti: prendi il sopravvento. Poi calcoli gli attacchi, sbalzi le piastre e inizi a... avanzare con insospettabile naturalezza. Le spatole emergono dalla neve con facilità superiore al consueto, la postura del busto è più eretta, meno caricata in avanti, i muscoli dorsali scaricano sollecitazioni. E il passo si allunga, sensibilmente, al punto da richiedere un minimo di assuefazione per evitare sbalanciamenti. Le piastre Natural Walking Pl

se (NWP) di Maruelli scandano il tradizionale assetto di salita con le punte degli scarponi vincolate ai perni degli attacchi. Grazie a un'innovativa articolazione in corrispondenza del puntale, replicano la naturalezza della camminata durante l'avanzamento con le pelli. Diviene così possibile progredire sollevando anche la punta degli scarponi. Una soluzione che abbiamo messo alla prova studiando in salita tre versioni delle creazioni Maruelli, destinate a utilizzi radicalmente differenti.

M2: una piuma per i Vertical
Quanto di più essenziale. L'attacco per i Verticali Maruelli, realizzato in lega di alluminio-francese e ricoperto dal pieno mediante macchine a controllo numerico, prevede un puntale minimale in cui le tradizionali gancie vengono sostituite da una "colla" in metallo con, all'estremità, i perni per l'innesto dello scarponi. La caduta è possibile grazie allo sgancio rapido, di derivazione automobilistica, di uno dei perni. Allettano essendoci la forma, priva della classica molle a U, sopportata da forfori che lavorano per deformazione. Realizzato in versione Hyper Light, eccelsa di una massa di 48 g e elasticità da peso rilevato di 54 g, si rimpicciolisce 90 g per averci fino a 80 kg, costa 499,80 euro. Puntale disponibile anche con forfori a 4 viti anziché 2.

Lunghezza su misura
NWP-Lite può essere tagliata su misura oppure fornita in versione "standard". È abbinabile a qualsiasi attacco, specie il modello Race Maruelli M2 129 g. Il kit NWP-Lite con M2 costa 1.279,80 euro.

NWP-Lite

Destinata al gramsci, pesa 341 g. L'articolazione anteriore favorisce l'emersione delle spatole in neve fresca, agevolando l'avanzamento. Tiene il passo risulta particolarmente agevole. Le innessioni, però, richiedono una discreta pratica a causa della dinamica tra scarpa e sci. Articolazione, inoltre, si tratti in discesa con le pelli, è fondamentale non arruarsi, pena il ribaltamento, dato che le punte degli scarponi non sono vincolate. L'avanzamento simile alla camminata sconfigge il rischio di scivolare. I vantaggi dinamici compensano l'aggravio, non irrilevante, di peso.

SCHEDA TECNICA* NWP-Lite

Tipologia	piastre
Materiale	alluminio-francese
Peso	320 g (taglia 270 MP)
Colori	nero, argento
Prezzo	899,90 euro
	1.499,99 euro con predisposizione per Maruelli M1

PESO	325 g (taglia viti, taglia 270 MP)
VITI MONTAGGIO	8
PESO SINGOLA VITE	2 g
PESO IN PAIO PRONTO USO	341 g

NWP-VR

È la piastra più leggera della gamma. Destinata al vertical, pesa 152 g. La naturalezza nel muoversi gli si addossa alla neve, alla ricerca della massima scorrevolezza. Infine l'aggravio di peso, favorendo al contempo la tenuta delle pelli. Specie in condizioni estreme. Sono il profilo cronometrico non si registrano sostanziali vantaggi, ma l'affaticamento muscolare è nettamente inferiore, a parità di abitudine gradatamente la regione inguinale, maggiormente sollecitata. Un prodotto specifico per le gare di salita, funzionale anche per allenamenti e lavori di potenziamento.

Total look Maruelli

NWP-VR può essere abbinata a qualsiasi attacco da gara oppure ai modelli Maruelli M2, specifico per verticali (54 g in versione standard), o alla combinazione dei puntali M2, adatto a un utilizzo race tradizionale (67 g) con la taloniera M2 122 g. Il prezzo dei kit Maruelli scende rispettivamente a 1.499,99 euro (piastra VR-M2) e 1.599,00 euro (piastra VR-M2-M2).

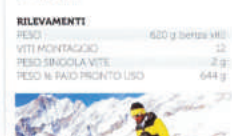

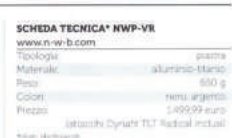

Posizioni diverse

Scopri il modo di differenziare la tua salita in neve, il movimento del tuo corpo e la tua postura. Il nuovo NWP-Lite ti offre la possibilità di adottare il tuo modo di salire, che prevede la punta degli scarponi vincolata agli sci.

Suole sino a 350 mm

NWP-FRD è compatibile unicamente con attacchi Dynafit TLT Radical. Può ospitare scarponi con lunghezza della suola sino a 350 mm. Gli skizzatori beneficiano di un apposito supporto innestabile nella piastra.

History of the Natural Walking Plate (NWP)

All our products are born from the passion for technology, biomechanics and the development of new solutions.

The **NWP** is born after a long backcountry-muntaineering experience and after a particularly intense season in places where we have been compelled to approach in long valleys before very long and steep climbings, and to the daily use of skis also for several days.

Despite the fact that the participants were young athletes and equipped with top products, all the group ended up exhausted and with joints and lumbar pain and inflammations.

This is a situation that each Alpine Guide knows very well...

From Theory to prototypes:

The summer pause allowed us to think of the technical, and therefore biomechanic, reasons of the walking ski at feet and we got to the conclusion that bindings and boots compelled a skier to do an unnatural and extremely consuming movement, both in terms of energy consuming and in terms of mental resources, due to the unnatural muscle tensions due to lower CG, etc... Once individuated the mechanic reason (old bindings preventing tiptoes from rising), we realised the first prototype of NWP toe lifter to understand whether

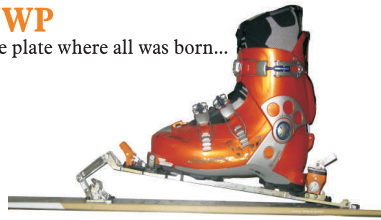

www.n-w-b.com

The first prototypes

NWP

The plate where all was born...

NWB

Integrating the bindings and the plate the Natural Walking Bindings Lite e Race were born too...

Four long years in developing:

In more than four years of accurate work we have eliminated all the useless pieces and we have solved both mechanic and kinematics complex problems, arriving to a series of solutions that are invisible as well as necessary.

The series of products :

NWB
Natural Walking Bindings

NWP
Natural Walking Plate

M1-RACE
"The" RACE Bindings

PLATES AND BINDINGS :

- Are very strong
- Easy maintenance
- Spare parts always assured
- Can be easily installed using our mask or a standard drilling mask (drilled with our mask once)

The **NWP** plates has over-measured components compared to the maximum expected loads, to avoid that fallings and unexpected events block them.

"Extrema Ratio" Usage

We have also guaranteed the "extrema ratio" usage (i.e. extreme remedy): in case the plate was accidentally bended, it is always possible to unscrew the bindings and to screw them, again, in the old holes present on the ski. Only the **M2** bindings and **NWP-VR** plate, dedicated to competitions, is pulled to the limit of the ratio

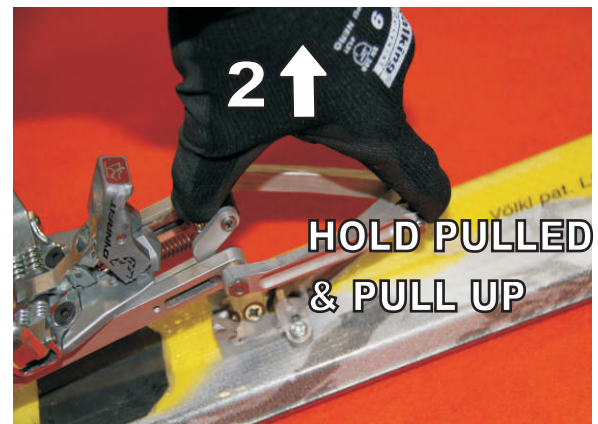

HOW TO UNLOCK for climbing:

1) PULL & HOLD PULLED

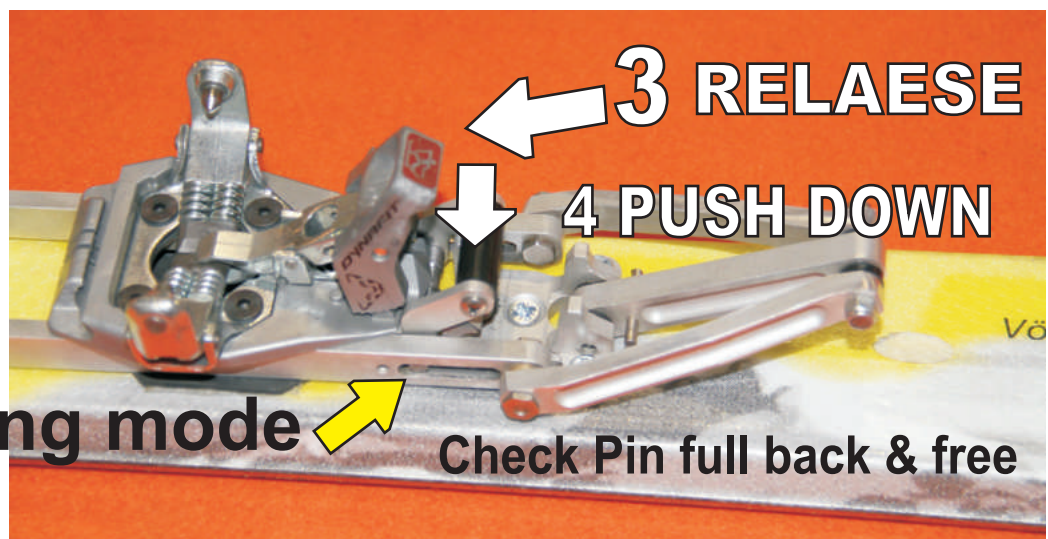

2) PULL UP holding

3) RELEASE

4) PUSH DOWN:

NWP-STD if you hold "AT" bindings

NWP-STD: it's a plate that is screwed between skis and bindings dedicated to people who already have Dynafit bindings (most models are compatible):

- The External drilling will maintain the existent drilling (if you need it).
 - It can be quickly mounted thanks to the drilling mask that can also be used as template to drill the original Dynafit drilling plate.
 - All the wear and tear parts (shafts e bearings) can be replaced.
- Speed Locking System (as for the other versions) allows to unlock the tip during the ascent and to lock it during descent. If necessary, with locked tip and open back binding, it can be used

Toe lifting
- Long (standard)
- Middle & Short on request

**NWP
STD** + Dynafit
